

## 2.5A Synchronous Buck Li-ion Charger

### General Description

The XR4059 is a 2.5A Li-ion battery charger. It utilizes a 600KHz synchronous buck converter topology to reduce power dissipation during charging. Low power dissipation and internal MOSFET allow a physically small charger that can be embedded in a wide range of handheld applications. The XR4059 includes complete charge termination circuitry, automatic recharge and  $\pm 1\%$  4.2V float voltage.

Additional features include shorted cell detection; temperature qualified charging and overvoltage protection. The XR4059 is available in a low profile SOT23-6 package.

### Order Information

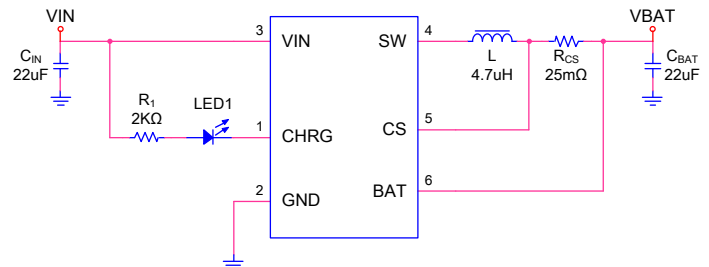

### Applications

- ✧ Portable Media Players
- ✧ Cellular and Smart mobile phone
- ✧ PDA/DSC
- ✧ Handheld Battery-Powered Devices
- ✧ Handheld Computers
- ✧ Charging Docks and Cradles

### Features

- ◆ Input voltage range 4.5V~5.5V
- ◆ Dynamic input current allocation for maximum charging rate
- ◆ 2.5A Maximum Charge Current
- ◆ No External MOSFETs and Blocking Diode Required
- ◆ Efficiency up to 90%
- ◆ Constant-Current/Constant-Voltage Charger
- ◆ Over Current Protection
- ◆ Consumption Available in SOT23-6
- ◆ RoHS Compliant and 100% Lead (Pb)-Free

### Typical Application Circuit

The  $C_{IN}$  must be as close as possible to the chip.

## Functional Pin Description

Package Type	SOT23-6
Pin Configurations	<p>Diagram of SOT23-6 TOP VIEW showing pin configurations:</p> <ul style="list-style-type: none"> <li>Pin 1: CHRG</li> <li>Pin 2: GND</li> <li>Pin 3: VIN</li> <li>Pin 4: SW</li> <li>Pin 5: CS</li> <li>Pin 6: BAT</li> </ul>

## Pin Description

Pin No.	Name	Description
1	CHRG	Open-Drain charge status output. When the battery is charging, this pin is pulled low by an internal N-channel MOSFET.
2	GND	Ground.
3	VIN	Positive Supply Voltage Input. Decouple with a 22 $\mu$ F or larger surface mounted ceramic capacitor.
4	SW	Switch pin. Connect to external inductor.
5	CS	Current Sense pin.
6	VBAT	Battery pin.

## Absolute Maximum Ratings

◇ VIN pin to GND	-----	7V
◇ BAT pin to GND	-----	7V
◇ Other pin to GND	-----	7V
◇ Maximum Junction Temperature	-----	150°C
◇ Operating Ambient Temperature Range (T <sub>A</sub> )	-----	-20°C to 85°C
◇ Maximum Soldering Temperature (at leads, 10 sec)	-----	260°C

**Note 1.** Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Thermal Information

◇ Maximum Power Dissipation (SOT23-6, P <sub>D</sub> , T <sub>A</sub> =25°C)	-----	0.6W
◇ Thermal Resistance (SOT23-6, θ <sub>JA</sub> )	-----	195°C/W

## Recommended Operating Conditions

◇ Ambient Temperature Range	-----	-20°C to 85°C
-----------------------------	-------	---------------

## ESD Susceptibility

◇ HBM(Human Body Mode)	-----	2KV
◇ MM(Machine Mode)	-----	200V

## Electrical Characteristics

## Application Information

XR4059 is a 2.5A synchronous buck Li-ion battery charger integrates 600KHz switching frequency and full protection functions. The charge current up to 2.5A can be programmed by using the external resistor for different portable applications and indicates the charger current information simultaneous.

In constant current mode, the charge current is set by the external sense resistor  $R_{CS}$  and an internal 50mV reference;

$$I_{BAT} = V_{CS} / R_{CS} = 50\text{mV} / R_{CS}$$

When the battery voltage approaches the programmed float voltage, the charge current will start to decrease. When the current drops to 10% of the full-scale charge current, an internal comparator turns off the charger. a charge cycle is terminated.

### Input Source Qualification

After REG amplifier powers up, the XR4059 checks the current capability of the input source. The input source has to meet the  $V_{IN} > 4.4\text{V}$  to enable the chip.

### Inductor Selection

Operating frequency was chosen for the buck switcher in order to minimize the size of the inductor. However, take care to use inductors with low core loss at this frequency. To calculate the inductor ripple current:

$$\Delta I_L = \frac{V_{BAT} - \frac{V_{BAT}^2}{V_{IN}}}{L \times f}$$

### Automatic Recharge

Once the charge cycle is terminated, the XR4059 continuously monitors the voltage on the BAT pin using a comparator with a 1.8ms filter time ( $t_{RECHARGE}$ ). A charge cycle restarts when the battery voltage falls below 4.05V (which corresponds to approximately 80% to 90% battery capacity). This ensures that the battery is kept at or near a fully charged condition and eliminates the need for periodic charge cycle initiations.

## Layout Considerations

To minimize radiation, the SW pin and input bypass capacitor leads (between  $V_{IN}$  and GND) should be kept as short as possible. A ground plane should be used under the switching circuitry to prevent inter plane coupling. The other paths contain only DC and/or 600KHz tri-wave ripple current and are less critical. With the exception of the input and output filter capacitors (which should be connected to GND) all other components that return to ground should be connected to GND.
